
Precautions:

1. The exhaust fan duct should be less than 4 meters long, with approximately 3.5 meters recommended.
2. If connected to an exhaust system, the fume hood's exhaust volume should be 1500 m^3/h.
3. The room's air intake volume must meet the fume hood's exhaust requirements; an intake volume of 1500 m^3/h is recommended.
4. The standard exhaust fan box uses a 380V three-phase fan. Ensure the three-phase power connections are correct and the fan rotates in the forward direction.
